

Figure 2. The total number of trips are plotted against time of the day in (a), day of the week in (b), and day of the month in (c). As can be seen in (a), a clear peak is observed between 19:00 and 20:00 while at between 2:00 and 6:00 there is a clear low taxi demands on average. Moreover, a higher demands is observed between Tuesday and Thursday on average (b). This same trend is seen in (c) again where the pattern is repeated each week.
